

**Are you an MSc student or otherwise interested in working on a short project focusing on obtaining insight into the Greenland population's perspectives and opinions on creating a sand industry in Greenland?**

We are looking for a motivated student to work on a project for 3-6 months, potentially as a part of their MSc or BSc student thesis or as a student project.

The project *'Including Indigenous Perspectives in Emerging Greenlandic Resource Exploration'* is funded by the Carlsbergfoundation and will survey local views and public opinions about exploiting sand as a possible developing natural resource in Greenland.

The project will explore societal, economic and environmental factors related to a potential sand mining industry. How can Greenland move forward with an inclusive and open approach to climate adaptation that takes into account the concerns and experiences from local communities around Greenland? We are currently surveying these questions, where a unique dataset is composed to serve as an essential part of the project.

**Do get in touch! Please write a short motivation and attach your CV no later than January 4, 2021 to Mette Bendixen: [Metteben08@gmail.com](mailto:Metteben08@gmail.com)**

Remote working is possible. We encourage Greenlandic students to get in touch to hear more about the project. Please note that while this is an unpaid position, you will gain valuable data analysis experience, a chance to receive additional feedback and an opportunity to actively write scientific articles with an international team

**The project is led by:**

Research Fellow Mette Bendixen, Institute of Arctic and Alpine Research, University of Colorado, Boulder

Assistant Professor Rasmus Leander Nielsen, Ilisimatusarfik, University of Greenland

PhD student Kelton Minor, Copenhagen Center for Social Data Science, University of Copenhagen
